# SQL EXERCISES

Given this ER

Write the following SQL queries:

1. Name of window with AD_Window_ID = '100'
2. Update window with AD_Window_ID = '100' appending '--' to the name of window with AD_Window_ID = '100'
3. List of all tabs in window with AD_Window_ID = '100'
4. List of tab name + field name of all tabs in AD_Window_ID = '100' sorted by tab name and field name
5. Name and number of tabs of all windows
6. List of all windows with its number of fields, sorting by number of fields starting by the windows with a higher number of them
7. Windows with more than 5 tabs
